                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       * NOTE: Estimated insert size may differ from sequence length

(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a 'working draft' sequence. It currently

* CONSISTS of 15 contigs. The true order of the pieces

* is not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      findPhrapList

It currently consists of 29 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

CC of haematopoiesis, erythroid differentiation, ovarian follicular canalysis, borneone secretion, neuronal survival, spermatogenesis, bone CC formation, insulin secretion or cardiac morphogenesis are some conditions CC that can be diagnosed using the liver activin. Cell growth and CC differentiation can be stimulated by treatment with an liver activin CC compound or agent that upregulates the compound's expression. Antagonists CC can be used to treat liver diseases while agonists can be used to treat liver diseases while agonists can be used to compound may also induce bone growth (e.g. for treating osteoporosis or compound may also induce bone growth (e.g. for treating osteoporosis or compound may also induce bone growth (e.g. for treating osteoporosis or compound may also induce bone growth (e.g. for treating osteoporosis or compound may also induce bone growth (e.g. for treating osteoporosis or contain hamunoassays, to generate anti-idiotypic antibodies (which compound to liver activin receptors) and to inhibit liver activin. Also, transgenic animals containing liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins, or modularors.

Sequences derived from beta c cDNA clone is used for screening and cloning a liver activin beta e gene. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders

maturation, hormone secretion, neuronal survival, spermatogenesis, bone formation, insulin secretion or cardiac morphogenesis are some conditions that can be diagnosed using the liver activin. Cell growth and differentiation can be stimulated by treatment with an liver activin compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while agonists can be used to increase growth and regeneration of liver tissue. The liver activin compound may also induce bone growth (e.g. for treating osteoporosis or osteomalacia) or haematopolesis, particularly erythropolesis, e.g. for treating haemophilia, cystic fibrosis or menstrual disorders. Antibodies (which
                                                        are useful in immunoassays, to generate anti-idiotypic antibodies (which bind to liver activin receptors) and to inhibit liver activin. Also, transgenic animals containing liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins, containing the transgenic animals, are useful for screening for liver activin
                                                                                                                                                                                                                                                                                                                                                                                                                                derived from beta c cDNA clone is used for screening and cloning a liver activin beta e gene. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders of haematopolesis, erythroid differentiation, ovarian follicular

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                1637 TGGATTCACCAAAGTTTAGATCACTGCTGCCCAAA 1671
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAK52736;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         AAK52736 standard; cDNA; 1606
                                                                                                                                                                                                                           The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80302) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     05-FEB-2001;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               09-AUG-2001

         The sequences given in AAQ47709-10 represent embryo and liver derived human transforming growth factor-beta (TGF-beta) genes repectively. The proteins encoded by these sequences may be used in a pharmaceutical composition for the treatment of various bone, cartilage or tooth
                                                                                                                       New transforming growth factor-beta family proteins and DNA used in tissue and wound repair, in treatment of bone, cartilage
 defect's and in tissue and wound repair processes.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to polynucleotides (AAK51456-AAK53435) and the encoded polypeptides (AAM78323-AAM80392) that exhibit activity elating to cytokine, cell proliferation or cell differentiation or which may induce production of other cytokines in other cell populations. The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopolesis regulating activity, tissue growth factor activity, immunomodulatory activity and activity inhable activity and may be useful in the diagnosis and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 1; Page 1259-1260; 6221pp; English

The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA as initiated from the 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a CDNA library can be determined 'con meion retimers and orehood from the GS.

inflammatory responses -Isolated cadherin-like asymmetry protein-2 polynucleotide and polypeptide used to diagnose, treat and prevent autoimmune diseases and

Claim 1; Page 271-276; 286pp; English.

CC (CLASP-2). CLASP-2 can have immunosuppressive, immunomodulatory, antiarthritic, cytostatic, hypotensive, antirheumatic, CC antiinflammatory, antiarthritic, cytostatic, hypotensive, antirheumatic, CC antianaemic, haemostatic and neuroprotective activities (CLASP-2 can be CC used to inhibit an immune response in a subject by interfering with the CC ability of a CLASP-2 protein to bind to another T cell or B cell. An CC immune response in a subject may also be inhibited by administering an commune response in a subject may also be inhibited by administering an cC immune response in a subject may also be inhibited by administering an cC proteins and antibodies can be used to prevent or treat a CLASP-2 cC mediated disease, such as an autoimmune disease caused or exacerbated by increased activity of TH11 cells. They can also be used to treat the prevent immune responses and cC augment immune responsiveness in immunodeficiency states, inhibit cc proliferation and differentiation of cells involved in an inflammatory can exacerbated in an inflammatory considered and increase and increase c.g. arthritis, inflammatory bowel disease and increase consense e.g., arthritis, inflammatory consense e.g., arthritis, inflammatory consense e.g., arthri treated by disrupting CLASP-2 function include multiple sclerosis, rheumatoid arthritis, endometriosis and pregnancy induced hypertension The present sequence encodes mouse CLASP-1 which is used in the of the present invention

The present sequence encodes a cadherin-like asymmetry protein to designated Clasp-1. The Clasp-1 protein is a cell surface protein which contains certain classical cadherin characteristics, but exhibits an apical distribution pattern on the surface of lymphocytes. The membrane location of the protein correlates with the contact interface between T and B cells, and antibodies against an extracellular domain of the CLASP-1 protein disrupt T cell/B cell interactions. The Clasp-1 protein thus inhibits immune response. The polypeptide is useful in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Cadherin-11ke asymmetry protein-1; Clasp-1; immune response; autoimmune disease; hypersensitivity; transplantation rejection;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DNA encoding a murine cadherin-like asymmetry protein-l (Clasp-1).

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   inhibiting an immune response, especially in treating an autoimmune disease and hypersensitivities, prevention of transplantation rejection responses and augmentation of immune responsiveness in immunodeficiency states. The protein may also be useful for identification of the therapeutic molecules that function by inhibiting or stimulating the biological activity of Clasp-1. The Clasp-1 polynucleotide may be used for diagnostic and therapeutic purposes, especially for detecting the expression of Clasp-1 as a lymphocyte marker and may be used to detect Clasp-1 gene expression of aberrant Clasp-1 gene expression in disease

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC polymertide (II) sequences. (I) is useful as hybridisation probes, CC polymerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CC polymucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as imaging of sites expressing (II), (I) and (II) are useful in medical imaging of sites expressing (II), (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. CC diagnostics, forensics, gene mapping, Identification of mutations in CC esponsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and CC amino acid sequences. AASG4197-AAS94564 represent novel human CC diagnostic coding sequences of the invention.

CC at fire wiso intrombination or this patent did not appear in the printed constituents on the printed of account of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Query Match

PT Novel human genes and their expression products which are differentially expressed in different cell types

XX

Novel human genes and their expression products which are differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising the sequences given in AAX12532 to AAX17779. Also described is cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product is acteating at least one cancerous, where the gene product is encoded by one comprising detecting at least one suspected of being cancerous, where the gene product is encoded by one compine the sed polymucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and detection of polymorphisms. Polypoptides may also be used to vocalls (e.g. to identify abnormal or diseased utssue in a human, to cancerous, the polymorleotides may also be used to off an two cells (e.g. to identify abnormal or diseased tissue in a human, to cancerous, the polymorleotides of the invention are especially used in the CC diagnosts, prognosis and management of colorectal cancer, breast cancer, ce peptide analogues and antagonists.

                                                                                                                                                                                                                                                              CC maturation, hormone secretion, neuronal survival, spermatogenesis, bone confirmation, insulin secretion or cardiac morphogenesis are some conditions contact can be diagnosed using the liver activin. Cell growth and confirmation can be stimulated by treatment with an liver activin compound or agent that upregulates the compound's expression. Antagonists can be used to treat liver diseases while agonists can be used to compound may also induce bone growth (e.g. for treating osteoporosis or costeomalacia) or haematopoiesis, particularly erythropolesis, e.g. for creating haemophilia, cystic fibrosis or menstrual disorders. Antibodies are useful in immunoassays, to generate anti-idiotypic antibodies (which to liver activin receptors) and to inhibit liver activin. Also, containing liver activin gene can be used to produce the liver activin (in correctly processed and modified forms) proteins, containing and containing for liver activin modified forms) proteins, containing the useful for screening for liver activin
                                                                                                                            Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This cDNA encodes a murine liver activin beta e polypeptide. Sequences derived from a beta c cDNA clone is used for screening and cloning the activin beta e gene. Disorders of cell growth or differentiation (or susceptibility to them) are diagnosed by measuring liver activin gene activity or by detecting a mutation in the liver activin gene. Disorders of haematopoiesis, erythroid differentiation, ovarian follicular
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     sig_peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New isolated nucleic acid encoding sub-units of liver activin - useful for regulating growth and differentiation of cells, e.g. for treating liver, bone and haematopoietic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              20-NOV-1997;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 WO9822492-A1

                                     A Xenopus laevis liver-derived DNA library in Charon 28 vector, was screened with a rat activin beta-A cDNA probe. Five clones were isolated, including clone M3. They were subcloned in pUC19 and used to transform competent E.coli HB101 cells. Transformant E.coli HB101/PXar3 coding for the M3 BMP was sequenced.

No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.
